SUMMARY

Software Engineer with experience in web development, data structures, and algorithms. Selected for GSoC 2025 at GitLab to implement advanced Git commands in the Web IDE. Built projects such as hotel management system, trading platform, and chess. Seeking to contribute to scalable applications with cross-functional teams.

EXPERIENCE

Frontend Engineer, Wisemen, *Remote*. November 2025 – Present

- Developed dynamic forms using Vue, TypeScript, and Formango, ensuring validation.
- Implemented CRM modules where user can perform CRUD operations on clients, locations, and contacts.
- Implemented Auto-complete search component, which enhanced user experience.
- Typed end-to-end testing for testing forms behavior using Vitest, which ensured reliability.

Software Engineer, Google Summer of Code, Gitlab, *Remote*. May 2025 – Present

GitLab is web-based DevOps platform combining source code management, and CI/CD [Submission report](#)

- Selected as [GitLab Notable Contributor](#) for TypeScript Web IDE enhancements, which resolved 5+ year feature request, impacting thousands of developers by eliminating local setup barriers.
- Built “Amend and Force Push” feature, enabling users to update commits without locally cloning projects.
- Built “Create Branch” and secure “Delete Branch” features for speeding up development through easy branch management workflows while preventing unauthorized deletions.
- Built confirmation dialogs for preventing accidental destructive operations that cause data loss.
- Tested features with Jest which ensured 100% code coverage and reliability.
- Authored technical documentation for new features, ensuring accessibility for non-technical users.

OPEN-SOURCE CONTRIBUTIONS

GitLab.

- Migrated native Fetch to Axios for consistency and better error handling. [MR](#)
- Adjusted forms of feature flag and contributor success using Vue, which led to improvement in UX. [MR1](#) [MR2](#)

The Accord Project. Framework for smart legal contracts and automation of legal agreements.

- Developed locale-based number/text formatter for the template engine with TypeScript. Tested formatter accuracy using Jest. [PR](#)

Jenkins. Automation server for CI/CD pipelines, widely used by developers.

- Implemented unit tests using JUnit, Mockito, and JaCoCo which boosted test coverage by 22%. [PRs](#)

PROJECTS

The Wild Oasis.

- Built single-page hotel management app with React, React Query, and lazy loading for optimized performance.
- Designed PostgreSQL database with Supabase to store and manage guest reservations.
- Implemented reusable components with Compound Component Pattern for scalable code architecture.

Fullstack Trading Platform.

- Developed trading platform with Next.js, TypeScript, Material UI, and Framer Motion for responsive UI.
- Built OAuth login and role-based access control using NextAuth.js, JWT, Express, and MongoDB.
- Integrated Stripe with Node.js and REST APIs to enable secure, real-time payments.

Chess.

- Built Chess.com clone with JavaScript, HTML, and CSS implementing advanced rules such as pawn promotion.
- Designed scalable architecture using OOD principles and MVC pattern for maintainable code.

Car Rental.

- Built responsive landing page for car rental companies using React, SASS, and Tailwind CSS.
- Managed client-side navigation and routes using React Router DOM.

SKILLS

Frontend	JavaScript/TypeScript/ES6+, React, Next.js, HTML, CSS, Tailwind CSS, SASS/SCSS
Backend	Node.js, Express, Supabase, PostgreSQL, MongoDB, MySQL
Testing	Jest, JUnit, Vitest
Tools	Git, Github, Linux, Figma
Languages	English (Conversational), Arabic (Native)

ACHIEVEMENTS

- Ranked 48th out of 240 teams in the 2022 ICPC ECPC qualifications day 7.
- Solved over 1000 complex problems on problem solving platforms such as [LeetCode](#) and [Codeforces](#).
- Competed in rated Codeforces contests and earned Pupil title.

RECOMMENDATIONS

"I was Ahmed's mentor during his participation in the Google Summer of Code program where he worked on a project to expand the source control operations of GitLab's Web IDE. I want to highlight Ahmed's remarkable performance during the duration of the program. He worked in the project with discipline and dedication that translated into outstanding results: He was chosen as the Notable Contributor for the GitLab's 18.3 release. Ahmed has so much hunger for growth and knowledge that it inspired me as a mentor. He inquired the reasoning behind my advise and requested additional learning resources for the software development techniques that I referenced. He was receptive to my suggestions during code reviews and was very patient during this process. He communicated often, consistently, and requested feedback about his communication style. All these behaviors demonstrate a precocious professional maturity that allowed him to perform so well in this project. I see a bright future ahead of him and I'd recommend him for any project that require young talent with ambition and disciplined work."

-Enrique Alcántara, Staff Frontend Engineer at GitLab
